

Project Snapshot

Location:

Youngsville, Louisiana

Client:

National Modular Bank Building

Square Footage:

1,260

Features:

- Site-applied stucco finish
- Shingle roof
- Drive thru lanes
- Security enhancements

National Modular Bank Buildings

National Modular Bank Buildings required a new branch location in Youngsville, Louisiana. ATCO Structures & Logistics manufactured two 14 X 45 modular units and created a retail bank to complement the style of rental units in the neighbourhood. Site-applied stucco was used on the building's exterior as well as a 30-year composite shingle roof.

The interior design was in line with existing branch styles and included a 9-foot ceiling to create an open and spacious service centre.

The branch also includes drive through lanes with an eight-foot bullet resistant window at the teller area. Additional security enhancements include pre-wired security and phone system and vacuum tube shoot system for money transfer.
